

Yes please draft a warning notice.

Here's a professional warning notice you can send out to faculty, staff, or students:

Subject: ⚠️ Phishing Alert – “Hepatitis A Case Reported – Please Review” Email

Dear Colleagues,

We have identified a **phishing email** circulating with the subject line “*Hepatitis A Case Reported – Please Review.*” The message appears to come from University of Maine accounts and references Evergreen State College. It instructs recipients to click a link to a so-called “*Health Service Center.*”

Key details to note:

- The email may appear to come from legitimate @maine.edu addresses due to forwarding or account compromise.
- The message uses fear of a health incident to pressure recipients into clicking a link.
- The embedded link does **not** direct to an official UMaine or Evergreen State College resource.

What you should do:

- **Do not click any links** or download attachments in this message.
- If you received the email, **delete it immediately.**
- If you clicked the link or entered any login information, please change your password immediately and contact the IT Help Desk.

Phishing emails can look convincing, but remember: official health and safety announcements will always come directly from recognized University offices, not through unexplained forwards.

Thank you for staying alert and helping us protect our community.

Sincerely,

[Your IT / Security Office Name]

[Contact Information]

Would you like me to also prepare a **short version** (2–3 sentences) that could be posted on your school's website or social media?
